(b) receiving a predetermined signal that indicates changes in the operation states of the

server devices from the server devices by the client device and displaying the change in the

operation state of a specific server device on a screen thereof.

Please add the following new claim:

6.   A method for a server device to communicate with a client device in a network

where various digital devices connected to the network operate as the client or as servers, said

various digital devices having a protocol layer which is the same as an internet protocol stack on

an upper network communication layer, the method comprising the steps of:

transmitting a re-determined signal for indicating changes in the operation states of the

server device to the client device when the server device performs a predetermined operation and
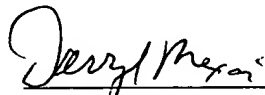

stops the operation or performs another operation.

REMARKS

Entry and consideration of this Amendment is respectfully requested.

Respectfully submitted,
